Protection

OVP (Over Voltage Protection)	OVP shuts down the PSU when the DC outputs exceed a certain level, which is determined by the PSU manufacturer.
UVP (Under Voltage Protection)	UVP shuts off the PSU when the voltage under the certain stander.
OPP (Over Power Protection)	OPP shuts off the PSU when the power drawn is between 115% ~ 135% of the rated power.
SCP (Short Circuit Protection)	SCP makes sure that the PSU shuts down when the 3.3V, 5V, and 12V rails short to any other rail, or to ground. It also ensures that no damage should occur to the unit, or your PC's components in the event of a short.
